

How It Works

- 1** A Casa Command employee will contact you to set up an appointment to visit your home.

Within 1-2 hours we will be able to capture 360 spherical photography of each room and area of home and yard, including all appliances, hardware, and electrical and HVAC systems.

- 2** The imagery captured will be loaded with Tags. Tagging information can include age of appliance, life expectancy, repairs needed, service history, warranties, etc. as well as details on finishing, installs, built-ins and more!

A Casa Command profile will then be turned over to you including all the photography and data about your home.

- 3** Add your own tags and images! Do you have personal belongings you want to keep track of or know more about? Add your items to your Casa Command app and let the system do the work.

Found out the age, manufacturer, cost, and even where you can get the item replaced.

- 4** Save time and money with Casa Commands robust tagging system. Repairs needed on an appliance? Export the tag directly to a suggested service pro; tag data including required parts and pricing are already detailed saving you the hassle.

Be the first to utilize our unique mapping and tagging system and manage your home your way.
